

Attention Anglers

Kokanaee Harvest Closure

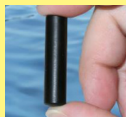

Eastern Washington University is conducting an acoustic tracking study on kokanaee salmon in Lake Roosevelt beginning in 2008.

Kokanaee with RED floy tags near the dorsal fin indicate the fish has been implanted with an acoustic tag.

These fish must be released back into the water between February 1 and March 21, 2008. These fish are available for harvest after March 22, 2008.

If you capture a tagged kokanaee: please note the tag number. If the fish is in good health, please release it. Call Holly McLellan at (509) 359-7498 with fish information. You will be entered into the bi-annual fish tag drawing.

A sample of kokanaee will be collected and an acoustic tracking tag will be surgically implanted into the fish. A small suture will be noticeable on the belly of the kokanaee.
